Accelirate is pleased to announce its new 90-Day Artificial Intelligence Accelerator Program, AI90X! Most companies are eager to apply Artificial Intelligence and Machine Learning into their businesses, yet, they don’t quite know where to start. There are many questions that come up when looking to implement AI into business operations such as: What kind of problems can AI solve for us? How can we be sure our data is safe? How much will it cost? and How much time and money will we save our business? Our new AI90X program was created to answer these questions and more!

Stemming from our expertise in the realm of Robotic Process Automation we know that the future involves more intelligent solutions to business problems than purely the solutions from simple automation. So, in addition to helping you achieve your automation goals, Accelirate will incorporate data-driven predictions and decision making into your business by leveraging state-of-the-art Machine Learning algorithms.

At Accelirate, we know that every business and their individual needs are unique and that they have various internal and external factors to accommodate for. With AI90X, we have designed our own agile AI E^3 Methodology to cater to each client’s business needs and considerations. The core principles of our method lie in strategic and adaptive planning, providing AI solutions that not only solve problems but offer a significant ROI and continuous AI model improvements to correspond with advancements in technology. Through the use of our E^3 Methodology and our AI90X Delivery Pod, Accelirate can deliver real results to your business fast!

How AI90X Works     |     E^3 Methodology

---

**EDUCATE**

- What ML Can and Can’t do: Presentation explaining general process methodology, our approach, examples and case studies
- Problem Identification: Work with relevant client stakeholders to identify and evaluate a set of suitable candidate processes
- Define the Problems, Solutions, and Key Performance Indicators

Deliverables
- Opportunity List

1-2 Weeks

---

**EVALUATE**

- Business Understanding & Problem Definition: Conversations with SMEs understanding details of inputs, outputs, data (magnitude, types, locations) & access logistics, to determine performance metrics, initial ROI and feasibility of the AI solution
- Data Understanding & Processing: Exploring the data, understanding patterns to identify trends, and defining the feature set
- Report on your data

Deliverables
- Project Proposal
- EDA (Exploratory Data Analysis)

4-5 Weeks

---

**EXECUTE**

- Model training & Optimization: Iterative approach to arrive at the best working model that achieves the target performance according to the metrics identified in the evaluate phase

Deliverables
- Final Report
- Beta Tested Model
- Deployment Plan

5-6 Weeks
At the end of the AI90X Program, you will have a working AI model that produces tangible results and you will be able to clearly see how AI projects work and add business value. Contact us today at info@accelirate.com to discuss how AI90X can help bring your organization into the 21st century.
